

OPM Code Generator

AI-based system that converts OPM diagrams into software

Sagi Yosofov & Liroy Ben Shimon | Supervisor: Dr. Natali Levi | Project code: 25-2-D-15

Motivation

- Improve the gap specification and development alignment.
- Reduce errors.
- Save time.
- Lower costs.

Key Requirements

- Input of OPM diagrams.
- Support for 4 programming languages.
- Integration with the Gemini API.
- Automatic generation of structured code.
- Iterative refinement of results.
- Download generated code.

Our Solution

- AI-powered OPM-to-code system.
- Direct translation from specification to implementation.
- Start with an initial code base in a programming language of choice.

User Interface

Project Metrics

SUS Questionnaire Results

System Usability Scale

Question	Score
I think that I would like to use this system frequently	4.6
I found the system unnecessarily complex	1.5
I thought the system was easy to use	4.3
I think that I would need the support of a technical person to be able to use this system	1.4
I found the various functions in this system were well integrated	3.7
I thought there was too much inconsistency in this system	1.5
I would imagine that most people would learn to use this system very quickly	3.9
I found the system very cumbersome to use	1.3
I felt very confident using the system	4.1
I needed to learn a lot of things before I could get going with this system	1.5

Overall SUS Score

83.5

AI Analysis

The provided OPM diagrams and their corresponding textual descriptions have been analyzed. All diagrams appear to be valid and consistent with OPM principles. The code generated is a Python representation of the OPM model, including objects, processes, and their relationships. The computational functions for various percentile calculations have been implemented as described. The structure captures the hierarchy of processes through in-Zoom relationships.

Generated Code

```
class TherapistGroup:
    pass

class Child:
    def __init__(self):
        self.age = None
        self.height = None
        self.current_weight = None
        self.personal_weight = None
        self.personal_weight_per_kg = None
        self.personal_weight_per_kg = None
        self.id = None

class TherapistGroup:
    pass

class TherapistGroup:
    pass
```
